Chapter I-Summary, Policy Issues, and Options for Congressional Action. 9 that will reduce exposures to hazards. This is of particular concern for certain occupational groups that are exposed to such hazardous substances over many years at much higher concentrations than the general population. It is well-documented that exposure to some chemical substances and to radiation at high doses causes cancer and genetic mutations (changes in genetic information). Not all mutations, however, cause disease (figure 1-4). The relationships between genes, mutations, and disease are becoming clearer with the development of molecular techniques. However, until the health effects of radiation are better understood, genetic and biological monitoring of nuclear power workers is necessary. Photo credit: U. S. Council for Energy Awareness
Nuclear Power Worker: Controversy continues regarding the carcinogenic effects of...
