Not illustrated. 1908 Excerpt: .making it difficult for a prospective buyer to draw comparisons; that speed regulation has been perfected so that the most reliable builders are willing to guarantee parallel operation of either 25-cycle or 60cycle alternators, and that the producer has not reached a stage of development corresponding to that of the gas engine. Self Synchronizing of Alternators Prof. Morgan Brooks presented a brief paper in which he explained his system of paralleling alternators. This consists merely of providing a coreless reactance coil in series with the generator to be cut into the circuit, and closing the switch to the bus-bars. It matters not whether the incoming alternator be in step with the machines connected to the bus-bars or not; the switch can be closed regardless of synchronism and the machine will be pulled into step with relatively small crosscurrents. The local Edison company provided means for demonstrating...
