

Primary Care Screening for Ocular Hypertension and Primary Open-Angle Glaucoma: Evidence Synthesis: Evidence Synthesis Number 34 (Paperback)

Filesize: 1.73 MB

Reviews

The publication is great and fantastic. Sure, it is enjoy, nevertheless an interesting and amazing literature. You will not truly feel monotony at at any moment of your own time (that's what catalogues are for concerning when you request me).

PRIMARY CARE SCREENING FOR OCULAR HYPERTENSION AND PRIMARY OPEN-ANGLE GLAUCOMA: EVIDENCE SYNTHESIS: EVIDENCE SYNTHESIS NUMBER 34 (PAPERBACK)

To save **Primary Care Screening for Ocular Hypertension and Primary Open-Angle Glaucoma: Evidence Synthesis: Evidence Synthesis Number 34 (Paperback)** PDF, please access the web link listed below and download the document or have accessibility to additional information that are highly relevant to PRIMARY CARE SCREENING FOR OCULAR HYPERTENSION AND PRIMARY OPEN-ANGLE GLAUCOMA: EVIDENCE SYNTHESIS: EVIDENCE SYNTHESIS NUMBER 34 (PAPERBACK) book.

Createspace, United States, 2013. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book ***** Print on Demand *****.Glaucoma is a progressive optic neuropathy that results in structural changes in the optic nerve head and visual field defects that may lead to severe visual impairment or blindness. Glaucoma may arise secondary to other causes such as trauma, steroid therapy, or inflammatory processes such as uveitis. Most cases of glaucoma, however, have no identifiable etiology and are termed primary glaucoma. Glaucoma is also classified as either open-angle glaucoma, in which the angle between the cornea and the pupil is normal, or closed-angle glaucoma, in which this angle is narrowed. Primary open-angle glaucoma (POAG) is the most prevalent type in the U.S. population. The pathogenesis of optic nerve damage in POAG is not well understood, but is likely multifactorial. The primary risk factor for development of POAG is an increase of intraocular pressure (IOP) above 21 mm Hg, which is considered to be the upper limit of normal for IOP. In population studies, increasing IOP is associated with an increased prevalence of POAG. Increased IOP was once considered a defining feature of POAG. However, a significant proportion (25-50) of individuals with primary glaucomatous optic disc changes and visual field deficits have normal IOP measurements, a condition known as normal tension glaucoma (NTG). As a result, increased IOP is no longer considered to be part of the definition of POAG. Race is also an important risk factor for POAG. The incidence and prevalence of POAG also increase with age. Family history is also an important risk factor, indicating that glaucoma is partly attributable to genetic factors. For example, there is an approximately four-fold increase in risk of POAG in siblings of patients with glaucoma. Additional risk factors may...
