Springer Sep 1994, 1994. Taschenbuch. Book Condition: Neu. 23.5x15.5x cm. This item is printed on demand - Print on Demand Neuware - Kazhdan and Lusztig classified the simple modules of an affine Hecke algebra H_q ($q \in \mathbb{C}$) provided that q is not a root of 1 (Invent. Math. 1987). Ginzburg had some very interesting work on affine Hecke algebras. Combining these results simple H_q -modules can be classified provided that the order of q is not too small. These Lecture Notes of N. Xi show that the classification of simple H_q -modules is essentially different from general cases when q is a root of 1 of certain orders. In addition the based rings of affine Weyl groups are shown to be of interest in understanding irreducible representations of affine Hecke algebras. Basic knowledge of abstract algebra is enough to read one third of the book. Some knowledge of K -theory, algebraic group, and Kazhdan-Lusztig cell of Coxeter group is useful for the rest 144 pp. English.
